Continuation of 3. NOTE: The horizontal support surface of the container receptor portion being planar and integral with a bottom end of the container receptor portion is a new issue not previously presented in the claims. Examiner notes that this amendment is similar to the language agreed upon in the interview held 8/28/07, however, the agreed upon language included mention that the support surface formed a closed end of the container receptor portion to define over Dennison. Such language, including the closed end idea or not, was not previously mentioned in the claims and requires further consideration and/or search before a patentability determination is made.
